A good password is hard to guess, yet hard to remember. A bad one is easy to remember, yet easy to guess.

ZSS

Such problem causes billions of loses yearly to enterprises (76% of data breaches were the result of weak passwords*)

Is it possible for an employee to have a good password that is easy to remember and at the same time hard to guess?

Yes! check out ZSS Login Enterprise, the World's first GeoGraphical Password Solution.

It solves this memory problem, by utilizing the remarkable human ability to remember geographical locations.

Your employees instead of writing difficult to remember, construct, and maintain conventional passwords, they will just pick places on planet Earth.

Places like favorite mountains, trees, rivers, or other wonderful locations!

GeoEye Satellite Image

This will generate extremely strong geographical passwords highly protective to your enterprise assets from cyber criminals.
